

Europcar

Global giant with services for fleets of all sizes

Europcar champions the idea of vehicle usership over ownership, as well as dispelling the myths around electric motoring. With its growing range of mobility solutions, Europcar is expanding the role of vehicle rental in reducing the environmental impact created by business fleets.

Whether renting an ICE, hybrid or fully-electric

car or van for a few hours, several days, weeks, months or longer, Europcar is supporting the evolution towards sustainable mobility. And, with its rapidly growing EV and PHEV rental fleet, Europcar is delivering a real-world, zero emissions driving-experience that allows businesses and their drivers to 'try before they switch'.
